Medical Data Extractor

DOCUMENT INTELLIGENCE

PURPOSE V2.0.0
Extracts patient data, procedure codes (CPT/ICD-10), and billing amounts from medical records and invoices.

INPUTS	OUTPUTS
DOCUMENT_URL	PATIENT_NAME
	BILLING_AMOUNT +2

Updated: 30/3/2026

[CONFIGURE](#)

Healthcare Fraud Sentinel

FRAUD & RISK

PURPOSE V2.1.0
Analyzes medical claims for anomalous patterns, upcoding, or unbundling.

INPUTS	OUTPUTS
CLAIM_DATA	IS_FRAUDULENT
PATIENT_HISTORY	RISK_SCORE +1

Updated: 30/3/2026

[CONFIGURE](#)

Patient Identity Validator

COMPLIANCE

PURPOSE V1.5.0
Verifies patient identity and insurance eligibility.

INPUTS	OUTPUTS
ID_DOCUMENT	VERIFICATION_STATUS
INSURANCE_CARD	ELIGIBILITY_CONFIRMED

Updated: 29/3/2026

[CONFIGURE](#)

Clinical Risk Modeler

VALIDATION

PURPOSE V2.2.0
Predicts clinical risk and medical necessity for procedures.

INPUTS	OUTPUTS
PATIENT_VITALS	RISK_SCORE
MEDICAL_HISTORY	RECOMMENDATION

Updated: 30/3/2026

[CONFIGURE](#)

Policy Servicing Specialist

COMPLIANCE

PURPOSE V1.0.0
Processes policy modification requests such as beneficiary changes, address updates, and coverage...

INPUTS	OUTPUTS
REQUEST_TYPE	IS_VALID_REQUEST
REQUEST_DETAILS +1	UPDATED_FIELDS +1

Updated: 30/3/2026

[CONFIGURE](#)

Renewal Risk Analyst

FRAUD & RISK

PURPOSE V1.0.0
Evaluates policy performance and claims history to determine renewal eligibility and premium adjustments.

INPUTS	OUTPUTS
POLICY_ID	RENEWAL_ELIGIBLE
CLAIMS_HISTORY +1	SUGGESTED_PREMIUM_ADJUSTMENT +1

Updated: 30/3/2026

[CONFIGURE](#)

Healthcare Compliance Auditor

COMPLIANCE

PURPOSE V1.0.0
Audits workflow execution and data handling for HIPAA compliance and regulatory adherence.

INPUTS	OUTPUTS
WORKFLOW_LOGS	COMPLIANCE_SCORE
DATA_ACCESS_RECORDS	VIOLATIONS_DETECTED +1

Updated: 30/3/2026

[CONFIGURE](#)

Aura Intake AI

WORKFLOW CONTROL

PURPOSE V1.0.0
Specialized in multi-channel message processing, intent classification, and automated workflow routing.

INPUTS	OUTPUTS
MESSAGE_CONTENT	INTENT
CHANNEL	CONFIDENCE +2

Updated: 30/3/2026

[CONFIGURE](#)

Hospital Exchange Coordinator

WORKFLOW CONTROL

PURPOSE V1.0.0
Manages bidirectional communication with hospitals for medical record requests and admission updates.

INPUTS	OUTPUTS
CASE_ID	MESSAGE_SENT
REQUEST_TYPE +1	RESPONSE_RECEIVED +1

Updated: 31/3/2026

Aurastack AI Agents – Structured Directory

Overview

The Aurastack platform is powered by a fleet of 11 specialized AI Agents, each designed with a specific "Intelligence Profile" to handle different stages of the insurance lifecycle. Unlike generic LLMs, these agents are constrained by strict schemas and have access to specialized tools.

1. Medical Data Extractor (doc_ext_01)

- **Type:** Document Intelligence
- **Role:** The "Eyes" of the claims engine.

Capability

Uses high-precision OCR and NLP to parse medical invoices and clinical reports.

Key Outputs

- Patient Name
- Procedure Codes (CPT/ICD-10)
- Billing Amounts
- Primary Diagnosis

Constraint

Strict HIPAA compliance; it is forbidden from extracting data that isn't explicitly verified in the source document.

2. Healthcare Fraud Sentinel (fraud_det_01)

- **Type:** Fraud & Risk Analysis
- **Role:** The "Security Guard."

Capability

Analyzes claims against historical patient data and clinical guidelines to find "Upcoding" (billing for a more expensive service than performed) or "Unbundling."

Tools

Accesses the clinical_guidelines_db.

Human Hook

Automatically triggers a "Human Override" if the fraud risk score exceeds 70/100.

3. Patient Identity Validator (kyc_val_01)

- **Type:** Compliance
- **Role:** The "Gatekeeper."

Capability

Verifies the authenticity of ID documents (Passports, DLs) and cross-references them with insurance card scans.

Tools

Integrated with ocr_engine and insurance_eligibility_api.

Usage

Primary agent for the KYC & Onboarding workflow.

4. Clinical Risk Modeler (risk_model)

- **Type:** Validation & Prediction
- **Role:** The "Medical Expert."

Capability

Predicts the probability of readmission or complications based on patient vitals and health history.

Tools

Uses a medical_knowledge_graph to provide evidence-based recommendations.

Constraint

All recommendations must be reviewed by a licensed physician (Human-in-the-loop).

5. Policy Servicing Specialist (policy_servicer_01)

- **Type:** Compliance / Admin
- **Role:** The "Account Manager."

Capability

Processes mid-term policy changes like beneficiary updates or address corrections.

Logic

It identifies if a requested change is "Material" (meaning it impacts risk) and decides if the case needs to be sent back to Underwriting.

6. Renewal Risk Analyst (renewal_analyst_01)

- **Type:** Actuarial / Risk
- **Role:** The "Retention Expert."

Capability

Evaluates a policy's performance over the last year. It looks at claim frequency and severity to suggest a premium adjustment (e.g., +5% or -2%).

Tools

Uses actuarial_models and claims_database.

7. Healthcare Compliance Auditor (compliance_auditor_01)

- **Type:** Compliance / Audit
- **Role:** The "Internal Auditor."

Capability

Scans system execution logs to ensure no HIPAA violations occurred. It checks who accessed what data and if the "Least Privilege" principle was followed.

Action

Can trigger an immediate system lockout if a critical data breach is detected.

8. Aura Intake AI (intake_orchestrator_01)

- **Type:** Workflow Control
- **Role:** The "Dispatcher."

Capability

Monitors the Omnichannel Inbox. It reads raw text from emails or chats, classifies the intent (Claim vs. Quote), and triggers the correct backend workflow automatically.

Confidence

Escalates to a human support agent if intent confidence is below 80%.

9. Hospital Exchange Coordinator (hospital_coord_01)

- **Type:** Workflow Control / Communication
- **Role:** The "Communicator."

Capability

Manages bidirectional talk with hospital records departments. It knows how to draft professional requests for missing medical records and tracks the "Case ID" across all threads.

10. Policy Issuance Engine (policy_gen_01)

- **Type:** Workflow Control / Document Gen
- **Role:** The "Closer."

Capability

Takes approved underwriting terms and generates the final legal contract (PDF). It then pings the core_insurance_api to activate the policy.

11. Sales Intake Specialist (sales_intake_01)

- **Type:** Document Intelligence / Sales
- **Role:** The "Lead Processor."

Capability

Specifically tuned for sales applications. It extracts demographic and salary data and integrates with a REST service to generate unique sales tracking codes.

The "Agent Anatomy"

Every agent in Aurastack follows a strict architectural pattern:

Input Schema

Defines exactly what data the agent needs to start (e.g., document_url).

System Instructions

The "Personality" and "Expertise" of the agent.

Tools

The external APIs or databases the agent can "call."

Output Schema

The structured JSON the agent must produce (e.g., risk_score: number).

Confidence Score

Every agent output includes a confidence level, allowing the Workflow Builder to route low-confidence results to humans.
