Here is your content **cleanly structured for handoff**, with **no changes to wording, logic, or meaning**—only organization and formatting applied.

Aurastack Case Detail View

Overview

The Case Detail View is the central workspace for managing individual insurance claims, underwriting files, or compliance cases. It provides a 360-degree view of the case, combining raw data, AI-driven insights, and human task management.

1. Global Interface & Navigation

Layout Structure

When you open a case, the interface is divided into three primary zones:

Entity Header (Top)

- **Case Identity**
Displays the Case ID (e.g., CASE-7721), Priority level (Critical/Standard), and current Status.
 - **Status Management**
Clicking the status badge allows you to manually transition the case (e.g., from IN_REVIEW to RESOLVED).
 - **Primary CTAs**
 - Execute Workflow: Manually triggers the assigned automation graph.
 - Assign Member: Reassigns the case to a specific adjuster or team member.
 - **Navigation Tabs**
Switches between the five core functional areas:
 - Overview
 - Documents
 - AI Analysis
 - Tasks
 - Audit & Compliance
-

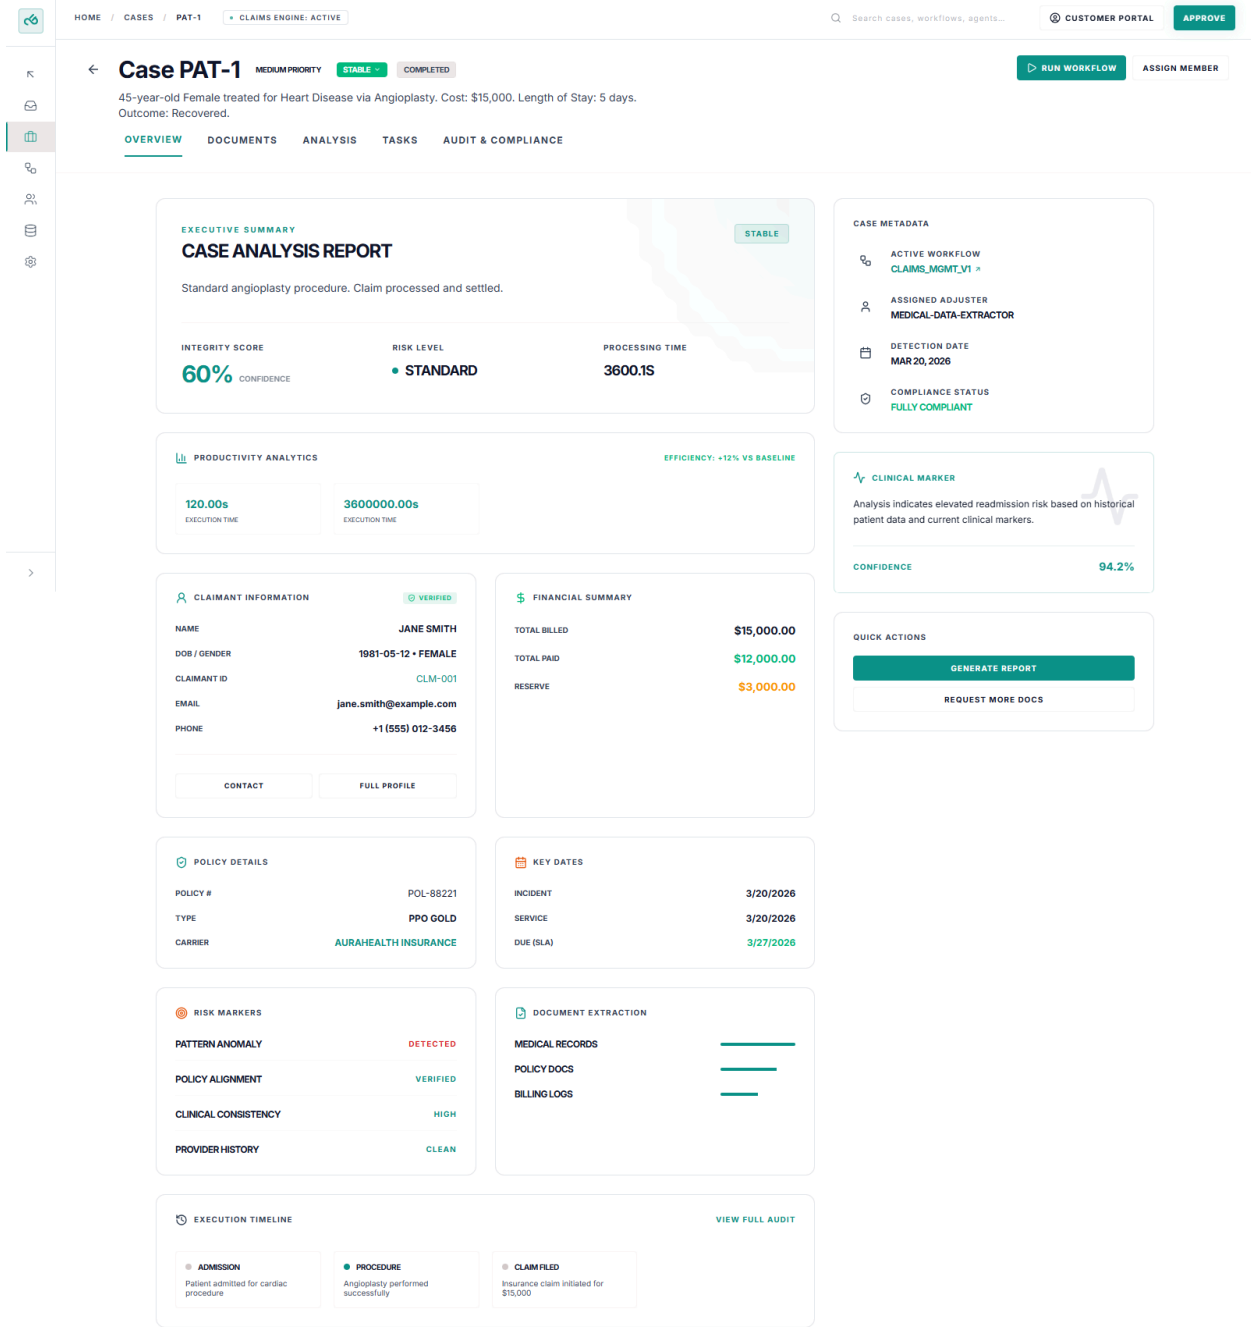

Right Panel (Contextual Sidebar)

- **Case Metadata**
Quick access to the Active Workflow ID, Assigned Adjuster, and Detection Date.
 - **AI Insight Highlight**
A high-level "Brain" card showing the most critical AI finding and its confidence score (e.g., "94.2% Confidence in Medical Necessity").
 - **Quick Actions**
 - Generate Report
 - Request More Docs
-

2. Tab: Overview (The Command Center)

Purpose

The Overview tab provides a synthesized view of the case's health and business context.

Components

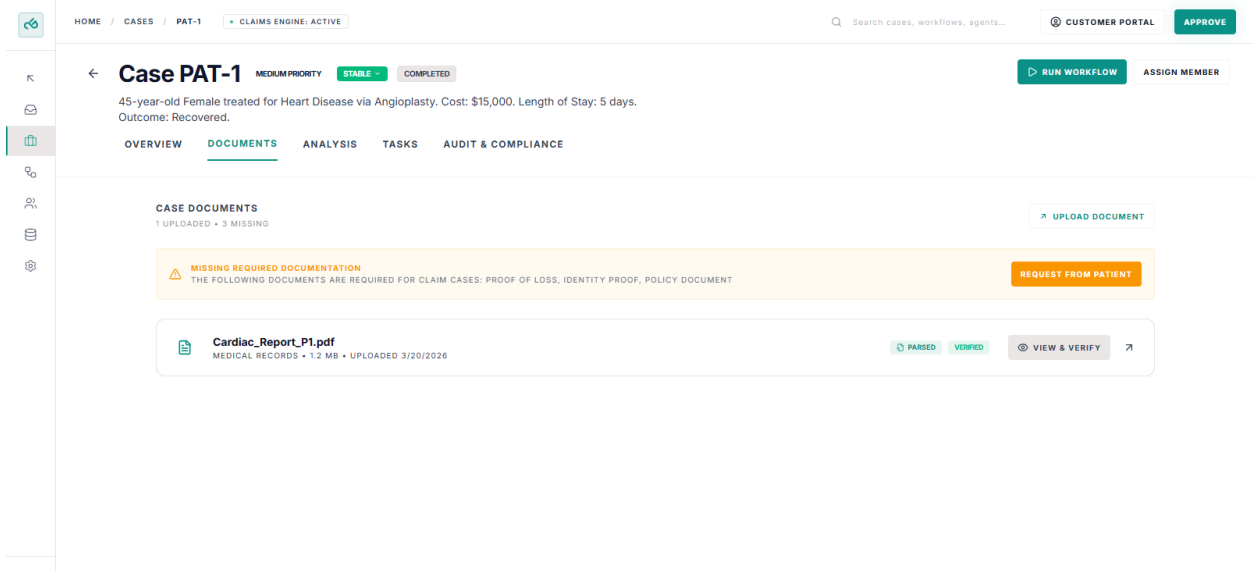

- **Executive Summary Card**
A narrative summary generated by AI that explains the "Truth of the Case," alongside key metrics like Integrity Score, Risk Level, and Processing Time.

- **Productivity Analytics**
A real-time chart showing the execution speed of the most recent workflow nodes, helping identify bottlenecks.
- **Business Context Grid**
Four specialized cards:
 - **Claimant Info**
Name, ID, DOB, and contact details with a "Verified" shield.
 - **Financial Summary**
Total Billed vs. Total Paid and the current Reserve amount.
 - **Policy Details**
Policy number, type, and carrier information.
 - **Key Dates**
Timeline of Incident, Service, and the upcoming SLA Due Date.
- **AI Markers & Extraction**
Status indicators for AI-driven checks like "Pattern Anomaly" and "Policy Alignment."
- **Execution Timeline**
A visual grid of the most recent events, color-coded by type (Blue for AI, Orange for Human).

3. Tab: Documents (The Evidence Locker)

Purpose

This tab manages all physical and digital evidence associated with the case.

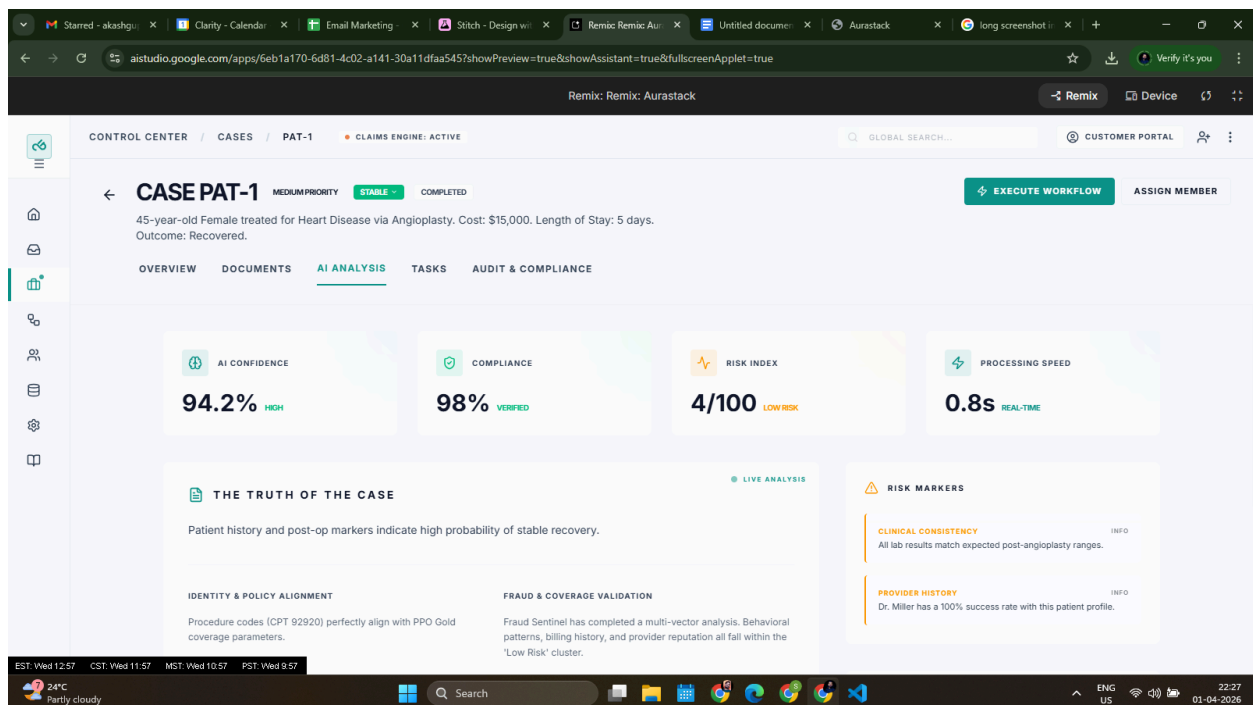

Components

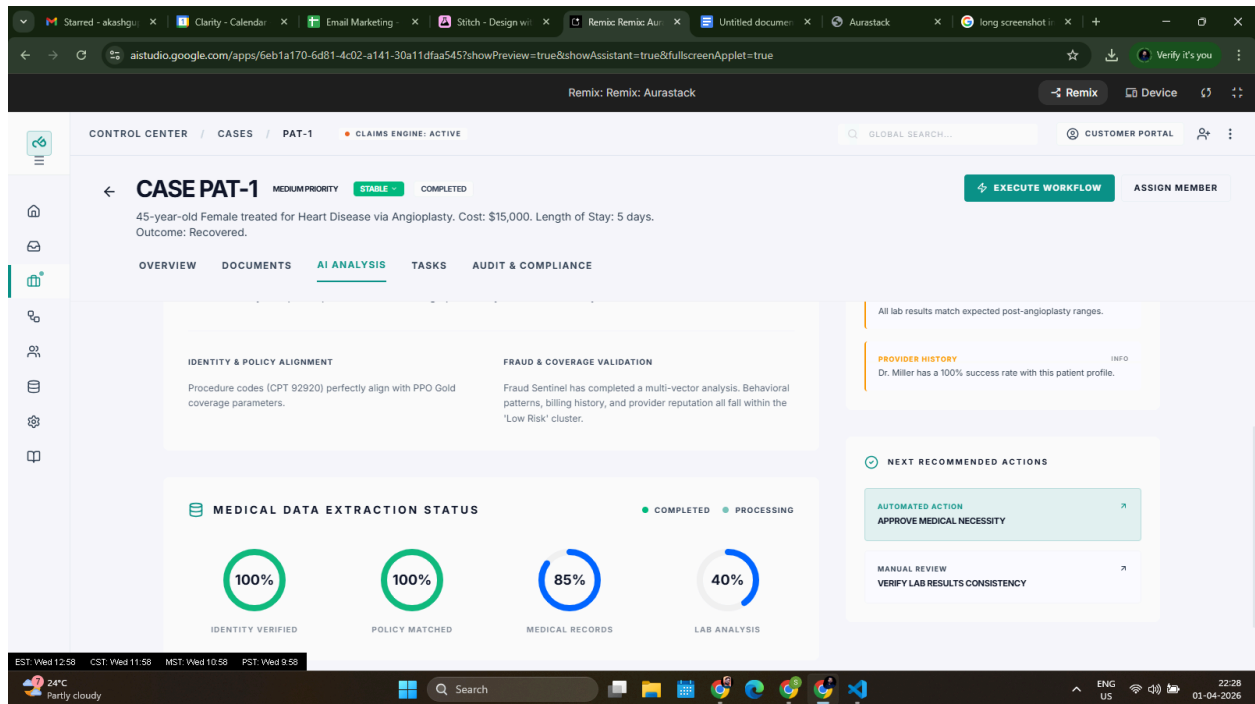

- **Missing Documents Alert**
A high-visibility amber banner that lists required documents not yet received (e.g., "Missing: Identity Proof"). It includes a "Request from Patient" CTA to automate the follow-up.
 - **Document List**
Each row shows the document name, type, size, and upload date.
 - **AI Extracted Badge**
Indicates if the AI has already parsed the data from this document.
 - **Verification Status**
Shows if a document is VERIFIED, PENDING, or has an ERROR.
 - **View & Verify CTA**
Opens the Document Viewer to inspect the file side-by-side with AI-extracted data.
-

4. Tab: AI Analysis (The Intelligence Deep-Dive)

Purpose

This view provides the technical reasoning behind the AI's conclusions.

Components

- **Top Stats Bar**
Four high-impact cards showing:
 - AI Confidence
 - Compliance Score
 - Risk Index
 - Processing Speed
- **The Truth of the Case**
A detailed narrative section where the AI explains its logic regarding "Identity & Policy Alignment" and "Fraud Validation."
- **Extraction Status**
Circular progress charts showing the completion percentage of data extraction across different categories (e.g., "Lab Analysis: 40%").
- **Risk Markers**
A vertical list of specific anomalies detected (e.g., "Duplicate Billing Detected") with descriptions and severity levels.
- **Next Recommended Actions**
AI-suggested next steps, such as "Approve Medical Necessity" or "Manual Review of Lab Results."

5. Tab: Tasks (The Workflow Engine)

Purpose

This tab tracks the operational progress of the case within its assigned workflow.

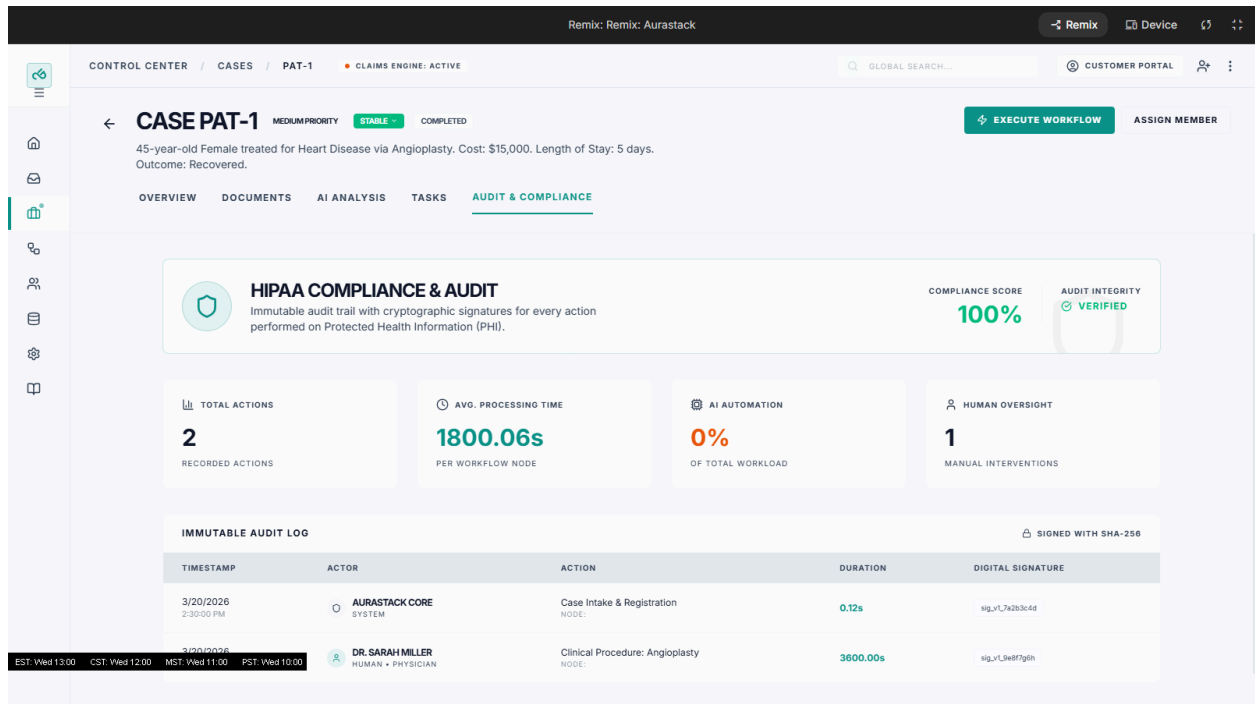

Components

- **Task List**
Displays every "Node" execution in the workflow.
 - **Status Badges**
 - COMPLETED (Green)
 - IN_PROGRESS (Amber)
 - FAILED (Red)
 - **Human Task CTA**
If a task requires human intervention, a "Complete Task" button appears, allowing the user to provide the necessary input or approval to move the workflow forward.
-

6. Tab: Audit & Compliance (The Ledger)

Purpose

The final tab provides the "Immutable Record" of the case for regulatory purposes.

Components

- **Full Audit Trail**
A chronological log of every action taken by the system or a human.
- **Compliance Sign-off**
Displays the digital signatures and timestamps for every critical decision point.
- **Data Lineage**
Shows the flow of data from intake to final settlement, ensuring full transparency for internal or external auditors.
